

HUNGARY'S INTERNATIONAL DEVELOPMENT PROGRAMME IN THE REPUBLIC OF UGANDA

In line with our commitment to leaving no one behind, in 2019 Hungary launched the first phase of a comprehensive, 16-million-euro development programme in the Republic of Uganda, the ultimate aim of which is to contribute to the long-lasting stability and economic prosperity of the country. The programme – designed on the basis of local needs – forms part of Hungary's overall efforts to contribute to the development of least developed countries.

The multi-faceted development programme is to be implemented by the Ministry of Foreign Affairs and Trade of Hungary and consists ultimately of five elements: water management, information technology, tourism, agriculture and e-governance. The programme shall be implemented in two phases, with a target end date of 2021. The first phase of the program – launched in early 2019 – involves the implementation of the projects indicated in the column to the right.

FIRST PHASE

Water management

providing refugees
and local communities
access to clean water

Information technology

enhancing local IT
capacities and
capabilities

E-governance

expanding local data
collection and
management
procedures

WATER

MANAGEMENT

PROVIDING REFUGEES AND LOCAL COMMUNITIES ACCESS TO CLEAN WATER

- **BUDGET:**
Approximately 1,17 million EUR
- **LOCAL PARTNER:**
Office of the Prime Minister of the Republic of Uganda
- **IMPLEMENTING PARTNER:**
VTK Innosystem

Hungary is dedicated to global efforts aiming to provide clean water to all. In accordance with this commitment, the project seeks to supply the people of the Rwamwanja Refugee Settlement and the neighbouring local communities access to clean water. Hungary is to establish several water towers – termed “water oases” – equipped with complex purification capabilities in order to provide potable water to vulnerable populations.

INFORMATION TECHNOLOGY

ENHANCING LOCAL IT CAPACITIES AND CAPABILITIES

- **BUDGET:**
Approximately 3,61 million EUR
- **LOCAL PARTNER:**
Ministry of Security of the Republic of Uganda
- **IMPLEMENTING PARTNER:**
Carinex

Cyber security threats pose one of the greatest challenges not only to developing countries, but to modern economies more generally. Through the implementation of the present initiative, Hungary seeks to enhance local cyber defence capacities and capabilities by providing the tools and knowledge necessary to establish a centre capable of thwarting information technology threats. The project consists of a technology transfer, as well as a capacity-building element.

E-GOVERNANCE

EXPANDING LOCAL DATA COLLECTION AND MANAGEMENT PROCEDURES

- **BUDGET:**
approximately 2,46 million EUR
- **LOCAL PARTNER:**
Ministry of Security of the Republic of Uganda
- **IMPLEMENTING PARTNER:**
ANY Security Printing Company

Data collection and management is a cornerstone of modern e-governance. Overseeing databases pertaining to people (citizens, residents, migrants, etc.) can be challenging, especially in countries hosting large amounts of migrants. In this respect, Uganda is one of the largest refugee-hosting countries in the world. This project is therefore premised on the need to support Ugandan efforts in compiling and managing biometric data, including related to migrants. Hungary shall thus establish a secure database enabling the biometric registration and identification of people.
